

ITEM 7:

REQUEST: Consideration of a request by the Department of Environmental Protection, Division of Recreation and Parks for approval of an accelerated process for amending land management plans to facilitate the development of new public camping facilities in state parks.

LOCATION: Statewide

STAFF REMARKS:

Camping in the outdoors has been an integral part of Florida's state parks program since the Civilian Conservation Corps developed the original state parks in the 1930s. Over the 76-year history of the state park system, camping has provided memorable outdoor experiences for millions of Florida residents and visitors. Camping has also contributed significantly to the state's economy and the economies of local communities.

Currently, 53 state parks offer facilities for overnight family camping. "Family camping areas" consist of campsites that are designed to accommodate a variety of camping equipment, including self-contained recreational vehicles, pop-up campers and tents. They typically include paved or stabilized roads, stabilized camping pads, bathhouses or restrooms, picnic tables and grills, connections for water and electrical service, and other amenities such as playgrounds and interpretive facilities. State parks currently provide a total of 3,501 family campsites. More than 2 million visitors enjoyed family camping in state parks during Fiscal Year 2009-2010, generating revenues exceeding \$15.5 million.

The Department intends to expand family camping opportunities throughout the state park system. A total of 56 parks which do not currently offer family camping have been identified as having the potential for development of family camping facilities. The new facilities will be designed, constructed and operated by private entities selected through the Department's procedures for soliciting and contracting state park concession services. The Department will retain full control over all aspects of planning, design, construction and operation of the new facilities to ensure consistency with the mission and quality standards of the state park system. This system-wide expansion of camping opportunities will increase the level of public benefits state parks provide, enhance the economic benefits of state parks, create jobs, and move the state park system closer to economic self-sufficiency.

To implement this expansion, the Department will solicit business proposals from interested private entities for the 56 identified parks. Based on the responses, the Department will select parks to receive further consideration for new development. Management plans for those parks will be amended to identify the location and scale of new camping areas in the same manner as done in all state park management plans. The amendment process will include a local public meeting for all of the parks. Amendments for parks larger than 160 acres will also be reviewed by an appointed advisory committee, as required by Section 259.032, Florida Statutes.

At the conclusion of the public review process, plan amendments will be submitted to the Division of State Lands for consideration by the Council. The Department requests that the Council's review of these amendments be conducted through a negative response process, in which only those specific amendments that are requested by one or more Council members would be scheduled for consideration at a regular meeting of the Council. All plan amendments would be posted on the Council website for at least two weeks, as is currently done for land management plans smaller than 160 acres and minor plan amendments, and an electronic mail

notice would be sent to Council members, staff and interested parties to inform them of proposed plan amendments.

STAFF RECOMMENDATION: Approve
